PROFESSIONAL SUMMARY

Data Science and Artificial Intelligence graduate focused on applied AI: building Retrieval-Augmented Generation (RAG) pipelines, LLM-powered assistants, and agentic workflows with LangGraph. Backed by the Google Data Analytics Professional Certificate and solid SQL/Python/Power BI foundations for data cleaning, exploratory analysis, and KPI reporting.

TECHNICAL SKILLS

Applied AI & RAG: Retrieval-Augmented Generation (RAG), hybrid dense + BM25 retrieval, ChromaDB, embeddings, AI agents & agentic workflows (LangGraph), prompt engineering, LLM APIs, and OCR (Tesseract).

Machine Learning: scikit-learn, classification, regression, model evaluation, and deep learning fundamentals.

Software Engineering & APIs: FastAPI, PostgreSQL, Git, Jupyter, Linux command-line basics, debugging, technical documentation, Windows, hardware/software troubleshooting, and basic networking.

Data Analysis: Python (Pandas, NumPy), SQL (MySQL, SQLite), JOINs, CASE, aggregations, date functions, relational data models, data cleaning and validation, exploratory data analysis (EDA), descriptive statistics.

Business Intelligence: Power BI (KPI measures, charts, slicers), Excel (PivotTables, KPI dashboards), Tableau, Matplotlib, Seaborn, data visualization, and communicating analytical findings.

PROJECTS

BAYYAN AI – Retrieval-Augmented Assistant for Tax Filing Feb 2026 - Jun 2026

Graduation project | Python, FastAPI, PostgreSQL, ChromaDB

- Contributed to a RAG-based Arabic tax-filing assistant with a FastAPI backend, PostgreSQL storage, and a LangGraph-orchestrated advisor for document-grounded Q&A and deduction/scenario analysis.
- Designed and built the RAG retrieval engine – a legal-structure-aware chunker for Arabic statutes, a multilingual E5 embedding pipeline (intfloat/multilingual-e5-large), and a versioned ChromaDB store; designed a two-stage hybrid retrieval algorithm (dense cosine search re-ranked by BM25, 60/40 weighted score fusion).
- Built the document extraction pipeline: Tesseract OCR (Arabic+English) for offline knowledge-base ingestion, plus a dual-tier multimodal pipeline (Gemini 2.5 Flash primary, Claude fallback below a confidence threshold) for parsing taxpayer invoices and receipts.

Olist – E-Commerce Delivery & Customer Review Analysis Aug 2026

Personal project | SQL, SQLite, Python, Power BI

- Joined and cleaned 96,353 records across orders, reviews, and customers in SQLite/Pandas; found a 7.99% delayed-delivery rate, with review scores dropping from 4.29/5 (on-time) to 2.57/5 (delayed).
- Built an interactive Power BI dashboard with delivery KPIs, comparison charts, and date, state, and status filters to support logistics decisions.

TRAINING EXPERIENCE

Inventory Controller Trainee | Pella Pharma Jul 2026 - Aug 2026

Completed one-month training in inventory tracking and stock reconciliation in pharmaceutical manufacturing, developing familiarity with accurate records and operational processes.

Software Engineering & Problem-Solving Trainee | 42 Irbid Sep 2025 - Oct 2025

Practiced programming logic, debugging, and root-cause analysis through peer-to-peer projects, strengthening teamwork and independent problem-solving. Program supported by the Crown Prince Foundation.

EDUCATION

B.Sc. in Data Science and Artificial Intelligence Sep 2022 - Sep 2026

Yarmouk University | Irbid, Jordan | Grade: Very Good

COURSES & CERTIFICATIONS

• Generative AI: Prompt Engineering | IBM Developer Skills Network | Jan 2026 • Fundamentals of Deep Learning | NVIDIA | Dec 2024 • Gemini Certified Student (University Tier), Google AI Competencies | Google for Education | Jun 2026 • Google Data Analytics Professional Certificate | Google/Coursera | Sep 2026 • Data Analytics Essentials | Cisco Networking Academy | Aug 2026 • Drive Your Success with Human Skills | Kiron Open Higher Education | May 2026 • Boost Your Career with AI | Kiron Open Higher Education | Mar 2026

LANGUAGES

Arabic: Native | English: Professional Working Proficiency
